

TEST SUMMARY REPORT

Project Name

User Management System Testing

Prepared By

Vamshi Krishna K
Tester Intern

Report Date

15 June 2026

1. Objective

The objective of this testing activity was to verify the functionality of the User Management System, identify defects, validate the application's behavior against specified requirements, and ensure that critical business functionalities operate as expected.

2. Testing Scope

The following modules were included in this testing cycle:

- User Login
- User Registration
- User Profile Management
- User Search
- Logout Functionality
- Session Management

The following activities were performed:

- Functional Testing
 - Test Case Execution
 - Defect Identification and Reporting
 - Regression Testing Planning
-

3. Test Environment

Parameter	Details
Operating System	Windows 11
Browser	Google Chrome
Testing Type	Manual Testing
Defect Tracking Tool	Google Sheets
Test Case Repository	Google Sheets
Tester	Vamshi Krishna K

4. Test Execution Summary

Metric	Count
Total Test Cases Designed	20
Total Test Cases Executed	20
Passed Test Cases	16
Failed Test Cases	4
Blocked Test Cases	0
Execution Completion Rate	100%

5. Defect Summary

Severity Level	Number of Defects
Critical	1
High	2
Medium	3
Low	0
Total Defects	6

6. Defects Identified

Bug ID	Description	Severity	Priority	Status
BUG-001	Password field displays entered characters	High	P1	New
BUG-002	Registration allowed without email address	High	P1	New
BUG-003	Dashboard accessible after logout using browser back button	Critical	P1	New
BUG-004	Duplicate user registration allowed	Medium	P2	New
BUG-005	Unsupported profile picture formats accepted	Medium	P2	New
BUG-006	Incorrect user details displayed during search	Medium	P3	New

7. Major Observations

- Core functionalities such as Login, Logout, Profile Update, and User Search operated successfully in most scenarios.
 - Validation checks for certain mandatory fields require improvement.
 - Session handling mechanisms need immediate attention due to security concerns.
 - Duplicate record prevention should be implemented effectively.
 - File upload restrictions should be strengthened.
-

8. Risks and Recommendations

Risks

- Unauthorized dashboard access after logout may lead to security vulnerabilities.
- Improper validation may result in poor data quality.
- Duplicate account creation may affect system integrity.

Recommendations

- Resolve all Critical and High severity defects before production deployment.
 - Perform regression testing after defect fixes.
 - Strengthen input validations across all modules.
 - Re-verify session expiration and access control mechanisms.
-

9. Conclusion

Testing activities for the User Management System were completed successfully as per the planned scope. A total of 20 test cases were executed, resulting in 16 passed and 4 failed test cases. Six defects were identified and documented according to defect reporting standards.

Based on the current testing results, the application demonstrates stable functionality in most areas; however, the identified Critical and High severity defects must be resolved and retested before considering the application ready for release.
