

TEST SUMMARY REPORT

TEST SUMMARY REPORT

Project Name: Smart Student Management System (SSMS)

Prepared By: Vamshi Krishna K

Role: Tester Intern

Test Cycle: Cycle 1

Date: 14 June 2026

1. OBJECTIVE

The objective of this testing activity was to verify the functionality, usability, and reliability of the Smart Student Management System. The testing focused on major modules including Student Registration, Login, Profile Management, Course Enrollment, Attendance Management, API Testing, and Logout functionality.

2. SCOPE OF TESTING

The following modules were tested:

- Student Registration
- Student Login
- Student Profile Management
- Attendance Management
- Logout Functionality
- API Testing (GET, POST, PUT, DELETE)

3. TEST EXECUTION SUMMARY

Total Test Cases Designed : 25

Total Test Cases Executed : 25

Passed Test Cases : 22

Failed Test Cases : 3

Blocked Test Cases : 0

Not Executed Test Cases : 0

Execution Completion Rate : 100%

4. DEFECT SUMMARY

Total Defects Identified : 7

Critical Defects : 2

High Severity Defects : 3

Medium Severity Defects : 2

Low Severity Defects : 0

Defects Reported:

BUG-001 : User able to login without entering password.

BUG-002 : Incorrect attendance percentage calculation.

BUG-003 : Unauthorized access to another student's profile.

BUG-004 : Duplicate course enrollment allowed.

BUG-005 : Email validation failure during registration.

BUG-006 : Student ID field is editable.

BUG-007 : Logout functionality does not terminate session properly.

5. API TESTING SUMMARY

The following API operations were tested using Postman:

POST - Student Registration API
POST - Student Login API
GET - Retrieve Student Details API
PUT - Update Student Profile API
DELETE - Delete Student API

API Test Execution Status:

Total APIs Tested : 5

Passed : 5

Failed : 0

6. CONCLUSION

The Smart Student Management System was successfully tested against the defined test scenarios and test cases. Most functionalities are working as expected. However, a few critical and high-priority defects related to authentication, authorization, and session management were identified.

It is recommended that the reported defects be resolved and regression testing be conducted before the application is considered for production deployment.
