

Security Validation Report

Project

AI/ML Web Application

Objective

To verify that the application protects user data, prevents unauthorized access, and follows basic security practices.

Security Test Execution

ST ID	Security Scenario	Expected Result	Actual Result	Status
ST-001	Login with invalid credentials	Access denied	Access denied	Pass
ST-002	Direct dashboard URL access without login	Redirect to Login page	Redirected successfully	Pass
ST-003	Session timeout validation	User logged out after inactivity	Session expired correctly	Pass
ST-004	Password masking verification	Password hidden from view	Password masked	Pass
ST-005	SQL Injection in login field (' OR '1'='1')	Input rejected	Input sanitized	Pass
ST-006	Cross-Site Scripting (XSS) attempt	Script execution blocked	Script blocked	Pass
ST-007	File upload validation	Only approved formats accepted	Validation successful	Pass
ST-008	Authorization validation	Users access only permitted data	Access controlled	Pass
ST-009	Logout functionality	Session terminated completely	Session terminated	Pass
ST-010	API authentication validation	Unauthorized requests rejected	Rejected successfully	Pass

Security Testing Summary

Total Security Tests: 10

Passed: 10

Failed: 0

Security Coverage: Authentication, Authorization, Session Management, Input Validation, File Upload Security, API Security

Conclusion

The application successfully passed all basic security validation scenarios. No critical vulnerabilities were observed during testing.
