

IMPROVEMENT RECOMMENDATION REPORT

Prepared By

Vamshi Krishna K

Role

Tester Intern

Objective

To provide recommendations for improving system quality based on observations made during testing activities.

1. DataInsight.ai Improvements

Observation 1

Password reset emails were not delivered consistently.

Recommendation

Implement email delivery monitoring and retry mechanisms.

Business Benefit

Reduces user frustration and improves account recovery success rates.

Observation 2

Dashboard filters occasionally returned inconsistent results.

Recommendation

Perform additional validation of filtering logic and include automated tests for filter combinations.

Business Benefit

Ensures users receive accurate analytical insights.

Observation 3

Session handling requires stronger validation.

Recommendation

Implement configurable session timeouts and display inactivity warnings before logout.

Business Benefit

Improves both security and user experience.

2. ScanVista Improvements

Observation 1

OCR extracted incorrect monetary values from invoices.

Recommendation

Enhance OCR training datasets and introduce confidence scoring for extracted values.

Business Benefit

Improves data accuracy and reduces manual verification efforts.

Observation 2

Multilingual text recognition accuracy was limited.

Recommendation

Expand language support models and provide users with language selection options.

Business Benefit

Improves usability for diverse user groups.

Observation 3

Multiple document uploads failed intermittently.

Recommendation

Implement upload queue management and improve error reporting mechanisms.

Business Benefit

Enhances reliability during bulk operations.

3. CertiFlow Improvements

Observation 1

Special characters were accepted in candidate names.

Recommendation

Introduce stricter input validation rules for certificate fields.

Business Benefit

Maintains professionalism and certificate integrity.

Observation 2

Duplicate certificate IDs were generated.

Recommendation

Use universally unique identifiers (UUIDs) or database constraints to ensure uniqueness.

Business Benefit

Prevents fraud and maintains trust in certificate authenticity.

Observation 3

Long candidate names caused formatting issues.

Recommendation

Apply dynamic font resizing and responsive text wrapping within templates.

Business Benefit

Ensures certificates remain visually appealing.

4. AlgoVisualizer Improvements

Observation 1

Performance degraded after repeated executions.

Recommendation

Optimize rendering logic and release unused resources after each execution.

Business Benefit

Provides a smoother learning experience.

Observation 2

Responsive design issues were observed on smaller screens.

Recommendation

Adopt mobile-first design principles and conduct regular cross-device testing.

Business Benefit

Improves accessibility across different devices.

Observation 3

Visualization progress was lost after page refresh.

Recommendation

Implement session persistence or user warnings before accidental page exits.

Business Benefit

Enhances usability and reduces frustration.

Conclusion

The testing activities identified several opportunities to improve system quality, reliability, usability, and security. Addressing the critical and high-priority recommendations should be considered before production deployment, while medium-priority improvements can be incorporated into future releases to enhance the overall user experience and maintainability of the applications.
