

TEST SUMMARY REPORT

Prepared By

Vamshi Krishna K

Role

Tester Intern

Report Date

16 June 2026

1. Objective

The objective of this testing cycle was to validate the functionality, security, usability, and reliability of various applications and workflows assigned as part of the internship program.

2. Applications Tested

1. DataInsight.ai
 2. ScanVista
 3. CertiFlow
 4. AlgoVisualizer
-

3. Testing Activities Performed

- Functional Testing
- API Testing
- UI Testing
- Regression Testing
- Authentication Testing
- Authorization Testing
- Workflow Validation
- Defect Reporting
- Test Documentation

4. Test Execution Summary

Application	Test Cases Executed	Passed	Failed	Blocked
DataInsight.ai	43	41	2	0
ScanVista	30	25	5	0
CertiFlow	20	16	4	0
AlgoVisualizer	25	22	3	0
Regression Testing	11	11	0	0
Authentication & Authorization	17	17	0	0

5. Overall Test Metrics

Total Test Cases Executed: 146

Passed: 132

Failed: 14

Blocked: 0

Overall Pass Percentage: 90.4%

6. Defect Summary

Severity Number of Defects

Critical 2

High 5

Medium 5

Low 2

Total Defects Logged: 14

7. Major Defects Identified

1. Incorrect OCR amount extraction in ScanVista.
 2. Duplicate certificate ID generation in CertiFlow.
 3. Password reset email failure in DataInsight.ai.
 4. Multiple file upload failures in ScanVista.
 5. Mobile responsiveness issues in AlgoVisualizer.
-

8. Regression Testing Results

Regression testing was conducted after defect fixes were implemented.

Regression Test Cases Executed: 11

Passed: 11

Failed: 0

Conclusion:

No adverse impact was observed on existing functionalities after implementing the fixes.

9. Security Testing Results

Authentication and authorization mechanisms were validated successfully.

Areas Covered:

- Login validation
- Session management
- Role-based access control
- Unauthorized access prevention
- API token validation

Result:

Security controls functioned as expected during testing.

10. Risks and Recommendations

Recommendations:

1. Improve OCR accuracy for financial documents.
 2. Implement stronger validation rules in CertiFlow.
 3. Enhance responsive design testing for UI-based applications.
 4. Increase automated regression test coverage.
 5. Introduce performance monitoring for bulk operations.
-

11. Conclusion

The testing activities assigned for Day 4 were completed successfully. Functional, security, regression, and workflow validations were performed across multiple applications. Most features behaved as expected; however, several defects requiring corrective action were identified and documented.

Based on the executed test cases and defect analysis, the applications demonstrate acceptable stability for further testing phases, subject to resolution of the identified critical and high-severity issues.
